FIT3179 DV1 Project Ideas

Volume 9: Food, Agriculture & Lifestyle

---

1. Australian Fruit Production

Investigate the production of fruits such as apples, oranges, bananas or berries across Australia. Compare production volumes over time and identify seasonal or long-term trends. Explore which fruits have experienced the greatest growth.

2. Australian Vegetable Production

Explore Australia's vegetable industry by comparing production of different crops over multiple years. Investigate how production has changed and identify vegetables with increasing or decreasing demand. Consider factors that may influence production trends.

3. Australian Dairy Industry

Investigate milk production, dairy farms or dairy product consumption in Australia. Compare trends across different years and identify changes within the dairy industry. Explore how production and demand have evolved over time.

4. Australian Beef Industry

Explore Australia's beef production, exports or cattle numbers. Compare trends across different states or years and investigate changes within the industry. Explore Australia's role as a major beef producer.

5. Australian Seafood Industry

Investigate seafood production, aquaculture or commercial fishing in Australia. Compare different seafood categories and identify trends in production or exports. Explore how the seafood industry has changed over time.

6. Australian Wine Industry

Explore wine production, exports or vineyard activity across Australia. Compare major wine regions and investigate long-term industry trends. Explore how Australia's wine industry has grown and diversified.

7. Australian Horticulture Industry

Investigate Australia's horticulture industry by comparing fruit, vegetable and nursery production across regions and years. Explore changes in production and identify major horticultural industries.

8. Organic Farming

Explore the growth of organic farming in Australia. Compare certified organic land, production or product categories over time. Investigate changing consumer demand for organic products.

9. Sustainable Farming

Investigate farming practices related to water conservation, soil management or environmental sustainability. Compare different agricultural practices and explore how Australian farming is becoming more sustainable. Identify long-term changes within the industry.

10. Agricultural Land Use

Investigate how agricultural land is used across Australia. Compare land allocated to cropping, grazing, horticulture and other agricultural activities. Explore changes in land use over time.

11. Australian Food Exports

Investigate Australia's exports of agricultural and food products. Compare export values across different commodities or international markets. Explore how Australia's food exports have changed over time.

12. Household Food Expenditure

Investigate how Australian households spend money on different food categories. Compare expenditure across household types, income groups or regions. Explore how food spending has changed over time.

13. Food Availability

Investigate the availability of different food groups in Australia using production and supply datasets. Compare trends across food categories and explore how Australia's food supply has changed over time.

14. Australian Livestock Industry

Investigate Australia's livestock industry by comparing cattle, sheep, pigs and poultry production across regions and over time. Explore changes in livestock production and agricultural output.

15. Australian Poultry Industry

Investigate Australia's poultry industry by comparing chicken meat and egg production across different years. Explore industry growth and production trends.

16. Australian Honey Industry

Explore honey production, beekeeping or honey exports in Australia. Compare production across years or regions and investigate factors affecting the industry. Explore the importance of bees to Australian agriculture.

17. Australian Grains

Investigate production of wheat, barley, oats or other grains across Australia. Compare crop production over time and identify long-term agricultural trends. Explore Australia's role in global grain production.

18. Australian Nuts

Explore the production of almonds, macadamias or other Australian-grown nuts. Compare production trends, export markets or industry growth over time. Investigate Australia's expanding nut industry.

19. Australian Flowers and Horticulture

Investigate Australia's flower and horticulture industries by comparing production, exports or domestic demand. Explore trends across different flower varieties or growing regions. Identify changes within the horticulture sector.

20. Irrigation in Australian Agriculture

Investigate irrigation practices across Australian agriculture. Compare irrigated crops, water use and irrigation methods across regions. Explore how irrigation has changed over time.

21. Australian Farmers

Investigate Australia's farming workforce by exploring farm numbers, workforce characteristics or business size. Compare trends across different agricultural sectors. Explore how Australian farming has changed over time.

22. Food Manufacturing

Investigate Australia's food manufacturing industry across different product categories. Compare production, business activity or employment over time. Explore how Australia's food manufacturing sector has evolved.

23. Australian Farmers and Climate

Investigate how weather conditions such as rainfall or drought influence agricultural production. Compare production across different years and explore relationships between

climate and farming outcomes. Focus on agricultural impacts rather than climate change itself.

24. Agricultural Productivity

Investigate productivity across Australia's agricultural industries. Compare productivity growth across farming sectors and explore factors contributing to long-term efficiency improvements.

25. Australia's Food System

Bring together multiple indicators such as food production, exports, consumption, farming and sustainability. Compare how different parts of Australia's food system have changed over time. Use multiple datasets to tell a broader story about Australian food and agriculture.

Note: Focus on understanding trends, production, consumer behaviour or industry development rather than simply comparing products. The strongest projects investigate a clear research question, use multiple related variables, and communicate meaningful insights through data.
